### **AIR QUALITY SMOKE ADVISORY** **Moderate to Unhealthy for Sensitive Groups: August 13 - 15, 2021**

The smoke and haze has impacted all areas of the Lake County Air Basin over the past several days. Multiple fires including the Dixie Fire, the McFarland Fire, the Monument Fire, the River Complex Fires, and other fires burning in Northern California and Oregon are creating the regional smoke impacts throughout Lake County and California.

All areas of Lake County have experienced intermittent air quality impacts from Moderate to Hazardous over the past week. Overall air quality for the past two days has remained “Moderate” to “Unhealthy for Sensitive Groups”. The air quality forecast for the weekend will range from “Moderate” to “UNHEALTHY FOR SENSITIVE GROUPS”. There is a moderate potential for “Unhealthy for all” conditions when strong inversion conditions develop in the overnight hours. The regional weather patterns are expected to keep the heaviest smoke concentrations North of the air basin. This forecast is based on the latest weather, monitoring, fire activity information and will be updated as necessary.

The District is actively monitoring the smoke impacts throughout the County. Additionally, you may go to [WWW.LCAQMD.NET](http://WWW.LCAQMD.NET) and follow the Quick Links for Air Monitoring for current smoke and air quality conditions. Current particulate levels in Lake County range from “Moderate” to “Unhealthy for Sensitive Groups”.

Concentrations of smoke may vary depending upon location, weather, and elevation. Smoke from wildfires and structure fires contain harmful chemicals that can affect your health. Smoke can cause eye and throat irritation, coughing, and difficulty breathing. People who are at greatest risk of experiencing symptoms due to smoke include: those with respiratory disease (such as asthma), those with heart disease, young children, and older adults.

These sensitive populations should stay indoors and avoid prolonged activity. All others

should limit prolonged or heavy activity and time spent outdoors. Even healthy adults can be affected by smoke. Seek medical help if you have symptoms that worsen or become severe.

Follow these general precautions to protect your health during a smoke event:

- Minimize or stop outdoor activities, especially exercise.
- Stay indoors with windows and doors closed as much as possible.
- Do not run fans that bring smoky outdoor air inside – examples include swamp coolers, whole-house fans, and fresh air ventilation systems.
- Run your air-conditioner only if it does not bring smoke in from the outdoors. Change the standard air conditioner filter to a medium or high efficiency filter. If available, use the “re-circulate” or “recycle” setting on the unit.
- Do not smoke, fry food, or do other things that will create indoor air pollution.

If you have lung disease (including asthma) or heart disease, closely monitor your health and contact your doctor if you have symptoms that worsen. Consider leaving the area until smoke conditions improve if you have repeated coughing, shortness of breath, difficulty breathing, wheezing, chest tightness or pain, palpitations, nausea, unusual fatigue, lightheadedness.

Localized areas of unhealthy air quality are possible throughout this fire season. Take appropriate measures whenever smoke is present.
